Optimistic UI

TON Core Roadmap

2025 H1

Article

TON Core plans to offer recommendations for improving user experience (UX), which will include the following principles:

1. **Human-readable actions**
   Displaying transactions in a simple and easy to understand way. For example: *"Deposit 100 TON on Stakee"* instead of complex technical data.

2. **Instant action visualization**
   Quickly display user transactions in services, explorers and wallets in Pending status.

3. **Optimistic UX**
   For example:
   For token transfers: the UI can immediately report the success of the transaction without waiting for all transaction chain to be fully executed.
   For DEX exchanges: the success of a transaction can be determined already at an intermediate stage of transaction chain execution.
